

Cambium Bark Garden Mulch

Goodwood Cambium Bark is a shredded bark mulch that derives from the 'cambium' layer of the bark of the sustainably harvested New Zealand Pinus Radiata tree.

Natural looking and weed suppressing. Breaks down in gardens and helps to keep the soil around plants at a healthy temperature throughout seasons.

Great protection from weather. Mulch protects roots from chilly weather and hot sun, giving plants a better life

Looks great. Blend into your environment using a natural wood effect to complement other elements in your garden

Manufactured on site by the team at Goodwood following strict quality control processes

Completely natural. 100% recycled untreated wood, completely natural and good for the environment

Doesn't scatter. The texture and shape of our mulch ensure it mats together and stays on the ground, even in stormy conditions

Moisture retention. Holds moisture in the soil to ensure constant water supply for your plants

Inhibits weed growth. Mulch suppresses new weeds yet supports existing plants
